- Psychology & Public Health Major

About HOPE

- Health Outreach Promotion & Education
- Part of rutgers student health
- Focuses on non clinical approaches to promoting mental wellness

First, some ground rules

Treat your peers with respect

Silence/limit distractions

There are no “bad” questions

Share at your own level

Confidentiality

what is stress?

- Stress is our physical, mental, and emotional reaction to external or internal any demand or challenge
 - Impairs critical thinking
 - Triggers our fight or flight response

Is all stress bad?

No!

Moderate levels of stress are okay, and can even be beneficial.

However...

high levels of stress can trigger aversive physical and emotional symptoms

how is stress **beneficial?** and how is it *not?*

Beneficial:

- When outcomes can be controlled
 - Motivates action and preparation
 - Increases focus and alertness

Not Beneficial:

- When outcomes cannot be controlled
 - Drains energy without changing outcomes
 - Increases anxiety and rumination

Important: Even controllable stress can be detrimental to our overall health and well-being when not managed properly

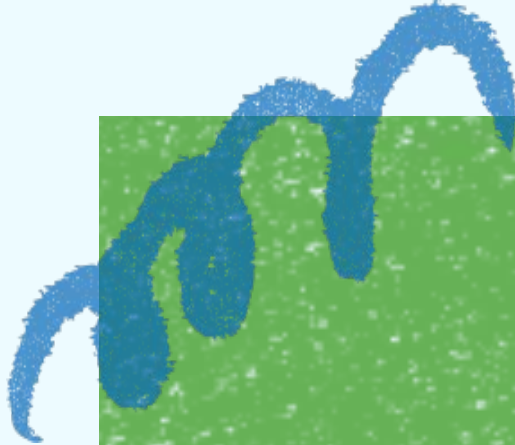

activity time!

I

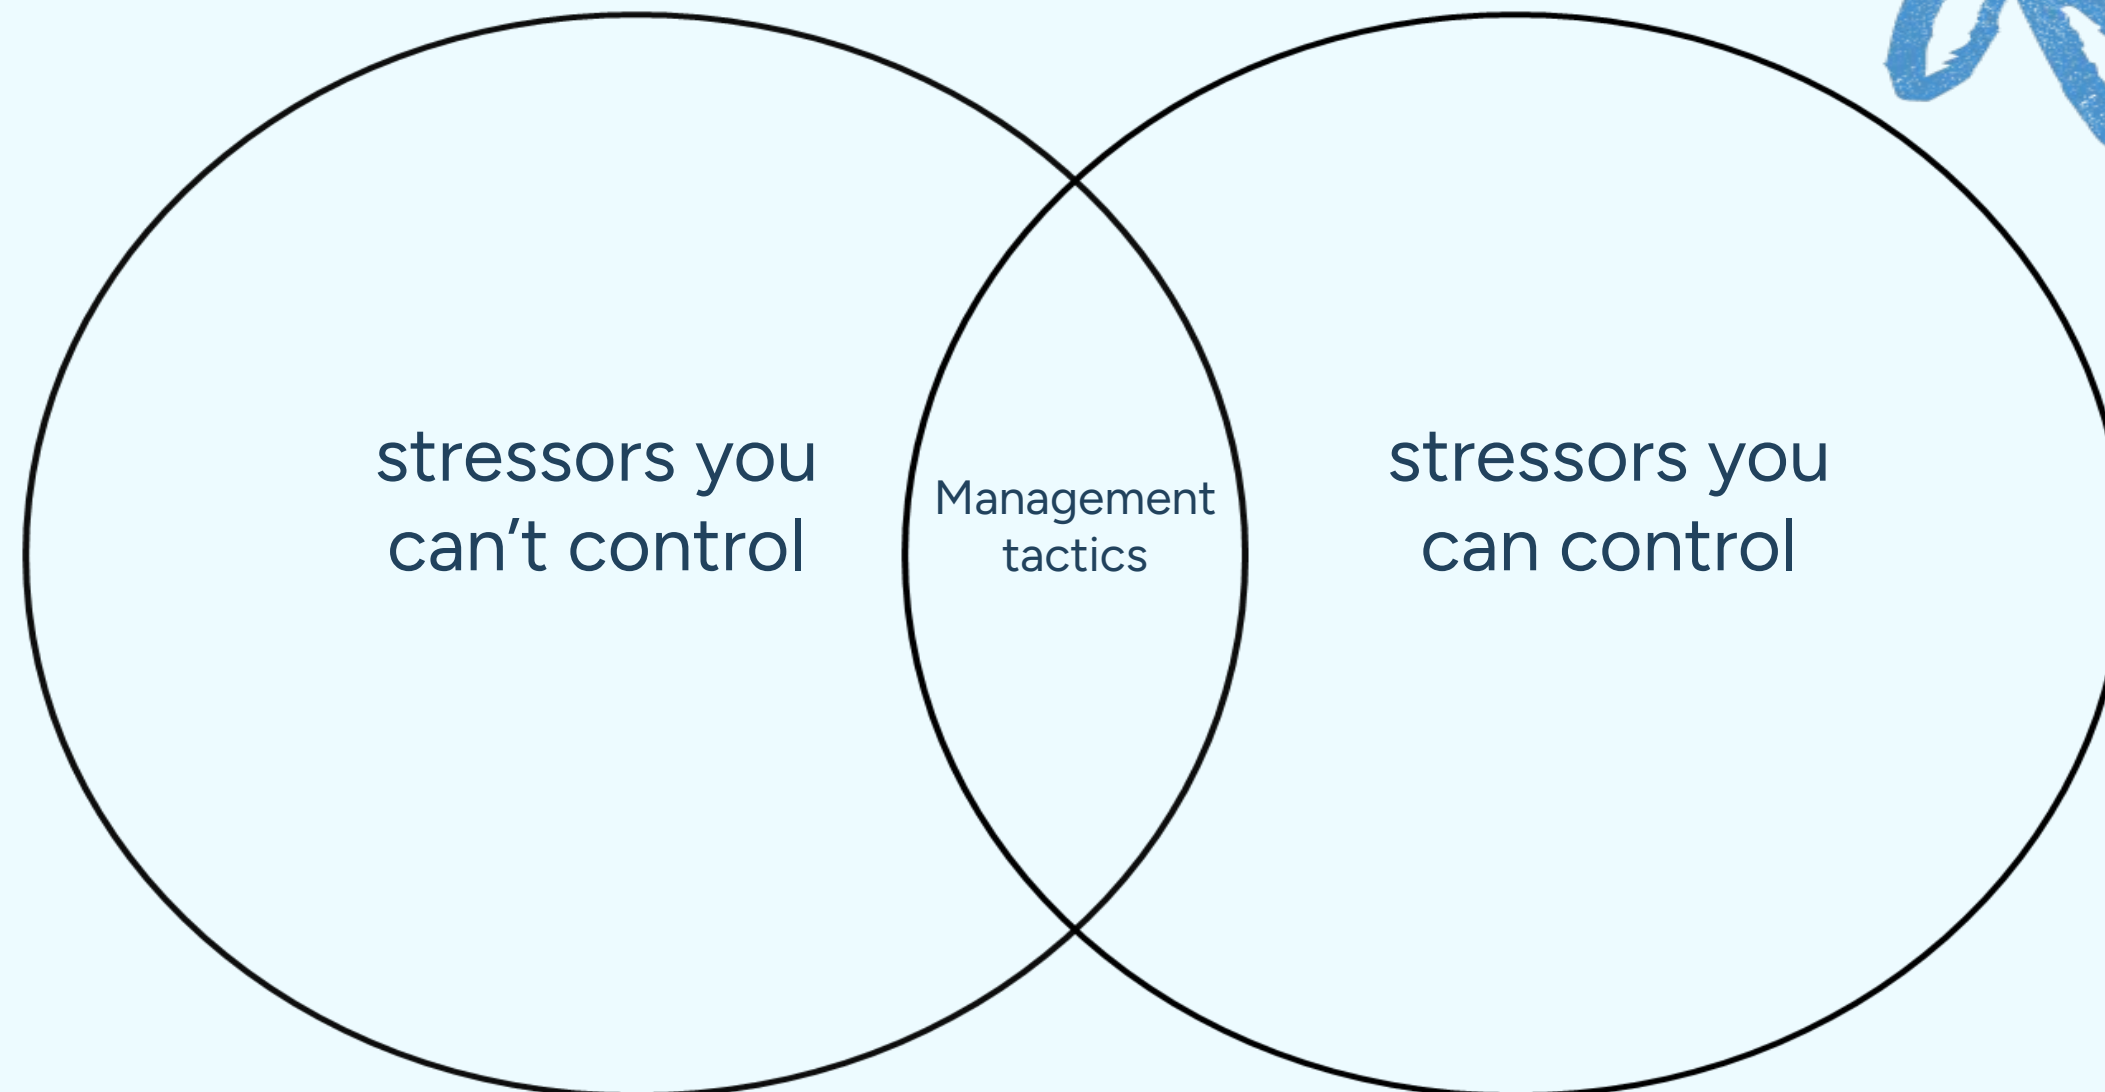

**Take out a piece of paper
and draw two circles.**

2

**List your stressors! What are some stress
you can control versus some you can't?**

activity time!

Tips to Stress Less

Stress Management Tip #1

Know your early warning signs!

By knowing your warning signs, you can take early action.

Physical:

Stomach upset
Headache
Eye strain
Muscle tension

Emotional:

Irritable
Anxious
Indecisive
Overwhelmed
Angry
Sad

Behavioral:

Withdrawing
Working too
much
Arguing
Over eating

Cognitive:

Self blame
Overly
self-critical

Stress Management Tip #2

Take care of yourself!

Practicing positive self care habits strengthens your ability to manage stress and recover more quickly.

Physically

- Get enough sleep and rest
- Eat regular, balanced meals
- Stay hydrated
-

Socially

- Set healthy boundaries in relationships
- Ask for help when needed
- Communicate openly and honestly

Emotionally

- Practice stress-relief techniques (breathing, journaling, mindfulness)
- Allow yourself time to relax and recharge

Stress Management Tip #3

Implement beneficial study habits!

Create an environment for yourself where you can show up in your academics without the emotional overload.

Physically

- Create a stress free environment for yourself

Socially

- Free yourself from distractions
- Put your phone on do not disturb mode

Emotionally

- This will reduce feelings of anxiety
- Increase your confidence and trust in yourself
- Feelings of relief will occur when a routine is established

Stress Management Tip #4

Create a structured routine!

Working in a routine strengthens your ability to manage stress and recover more quickly.

Physically

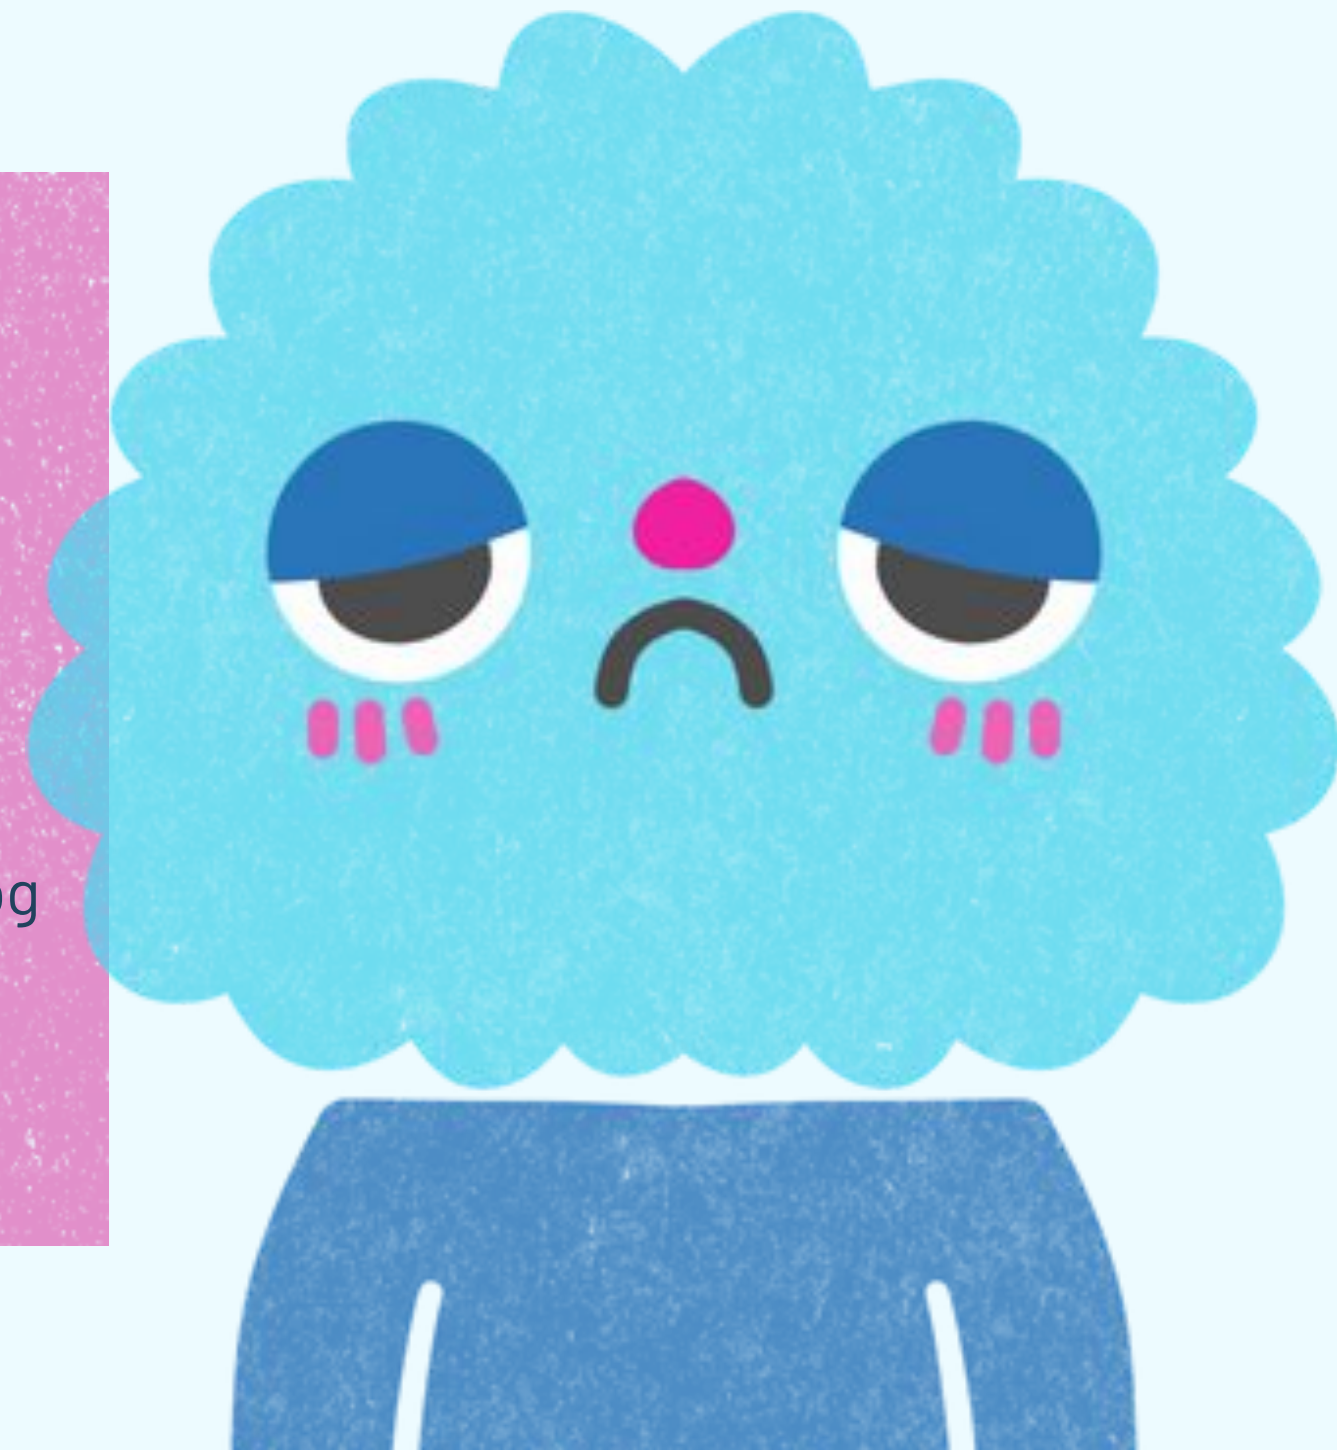

- Download and design an organized routine with digital tools or a physical planner
- Don't juggle multiple things at once

Socially

- Improves communication and boundaries
- Give yourself breaks

Emotionally

- Knowing what you're doing and when reduces uncertainty
- Fewer decisions reduces mental fog
- You'll feel supported

Stress Management Tip #5

Support yourself emotionally!

Don't let your stressful feelings dictate your day, and set aside time for yourself to process.

Physically

- Show up to your scheduled appointments
- Use campus resources
- Save energy for people and events that refill you

Socially

- Feeling overwhelmed? talk it out.
- Set boundaries
- Take social media breaks
- Set aside time for yourself after a social event

Emotionally

- Validating your emotions lowers their intensity
- You'll feel more grounded
- You learn how to handle difficult feelings
